

Wound Care Instructions

WOUND CARE

- All wounds must be kept clean and dry. Do not allow water on the incision site.
- Clean wound using sterile q-tips and peroxide (avoid peroxide around the eye area). Apply bacitracin or neomycin ointment (avoid these ointments if you have a known allergy to penicillin).
- If you notice any signs of pain worsening swelling or redness bring it to the physician's attention.
- Be extremely cautious while shaving around the wound site. You must not allow the sutures to be cut.
- If there is any significant gaping of the wound, call your physician.
